

INSE 7110 - WINTER 2012 - Preview: Dial-Out Conferencing with Centralized Mixers in NGNs

Roch Glitho, PhD Associate Professor and Canada Research Chair, Concordia University, Montreal, Canada

http://users.encs.concordia.ca/~glitho/

Dial-Out Conferencing with Centralized Mixers in NGNs

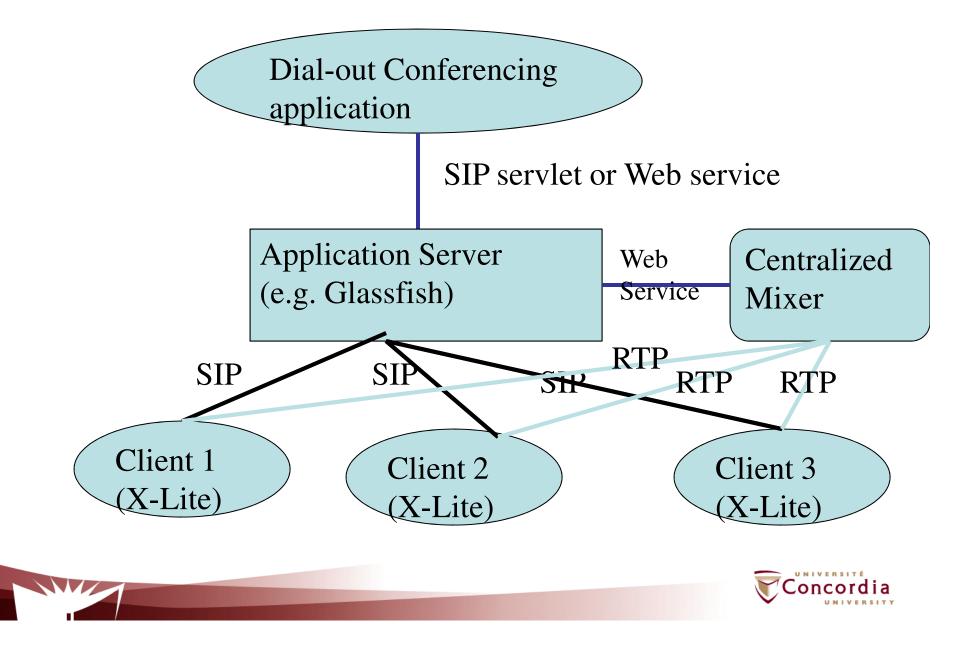

- 1 Objectives
- 2. Overview
- 3 Groups
- 4. Expected output
- **5. References**

- Learn how to use application servers (e.g. Glassfish) for application development and deployment in NGN environments (e.g. SIP environment)
- Learn how to use/re-use existing NGN user equipments (e.g. SIP X-Lite)
- Learn how to use the key VAS technologies (e.g. SIP servlets, Web services) to develop simple applications
- Develop and deploy a concrete application

- 1. Dial-out conferencing application: Consult reference [1] for the semantic
- 2. Interface between conferencing application and application server (Choice of VAS technology left to student If RESTFul Web services is used then full model already provided in reference [1])
- 3. Mapping between conferencing application interface and SIP messages to be done in application server (Suggested application server: Galssfish)
- 4. Interface between application server and centralized mixer: To be proposed by students (May be RESTFul Web services based or SOAP-Based Web services Java Media Framework (JMF) is suggested as basis for the mixer)
- 5. Clients could be any SIP client (e.g. X-Lite)

- The project should be done in group of 2
- For customization / personalization students should discuss with course instructor.

Expected output

- Live demo introduced by a short power point presentation (5 slides maximum)
- Report (20 pages maximum)
