

## COMP 333 — Week 1 Welcome

### Welcome to COMP 333 Data Analytics

Welcome to COMP 333.

My name is Greg Butler, and you can contact me at [gregb@cse.concordia.ca](mailto:gregb@cse.concordia.ca)

The TAs for the course are Stephanie, Hamed, and Sima.

Note that labs start on Thursday.

This is the COVID-19 emergency remote learning version of COMP 333 and it is an accelerated six-and-one-half week summer course so expect to pack a lot into the next few weeks (about 20 hours per week).

**It is important that you have access to internet and appropriate computer hardware (computer, webcam, microphone) and the ability to do online timed exams.**

It is important that you do each and every lab and submit the lab exercises and the lab assignments as this is how you will learn the skills with the Python tools.

It is important that you do each and every quiz both the self-test quizzes (which are not counted towards marks) and the actual timed quizzes (which do count towards marks) as these provide feedback on your knowledge gained from lectures and labs.

In Week 1 (this lecture) we will cover

- ▶ Data Analytics in a Nutshell to provide an overview.
- ▶ Course Outline which you should read very carefully.
- ▶ COMP333 Guide on getting the most out of the course.

All the best, Greg.
