

# SOEN 387 Web-based Enterprise Application Design

Stuart Thiel

Concordia University  
Department of Computer & Software Engineering

Fall, 2014

# Outline

## Review

# New Patterns: Transaction Script

- ▶ Transaction Script
- ▶ “Organizes business logic by procedures where each procedure handles a single request from the presentation.” Fowler 2003, p.110

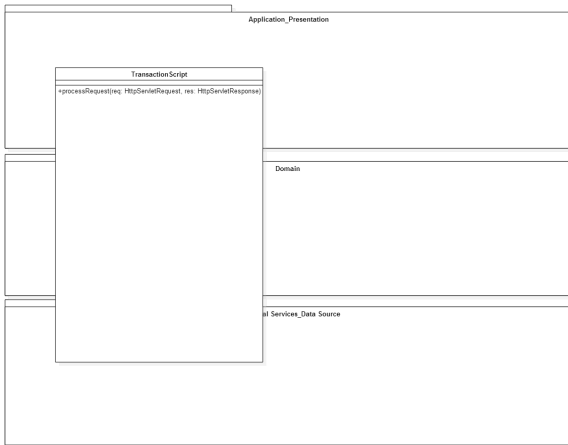

# Transaction Script New Responsibilities

- ▶ Transaction Script
  - ▶ Process Incoming Requests
  - ▶ Interact with Data Source
  - ▶ Do Domain Logic
  - ▶ Return Formatted Response

# Transaction Script Diagram

Review

# New Patterns: Row Data Gateway(RDG)

- ▶ Row Data Gateway
- ▶ “An object that acts as a Gateway (466) to a single record in a data source. There is one instance per row.”  
Fowler 2003, p.152

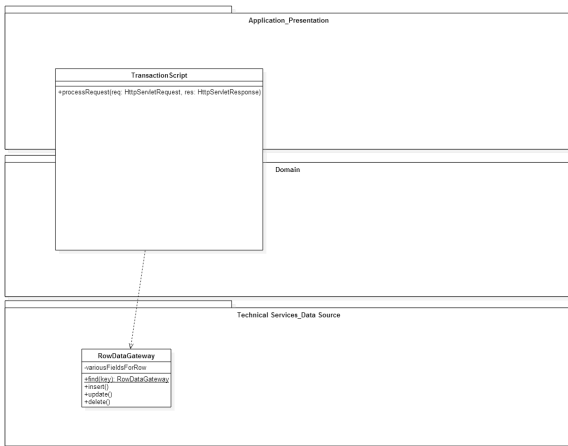

# Row Data Gateway New Responsibilities

- ▶ Interact with Data Source

# Row Data Gateway Diagram

Stuart Thiel

Review

# New Patterns: Template View

- ▶ Template View
- ▶ “Renders information into HTML by embedding markers in an HTML page” Fowler 2003, p.350

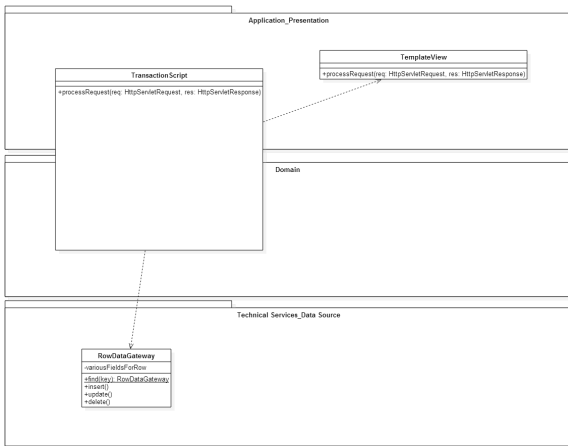

# Template View New Responsibilities

- ▶ Return Formatted Response

# Template View Diagram

Stuart Thiel

Review

# New Patterns: Page Controller

- ▶ Page Controller
- ▶ “An object that handles a request for a specific page or action on a Web site.” Fowler 2003, p.333

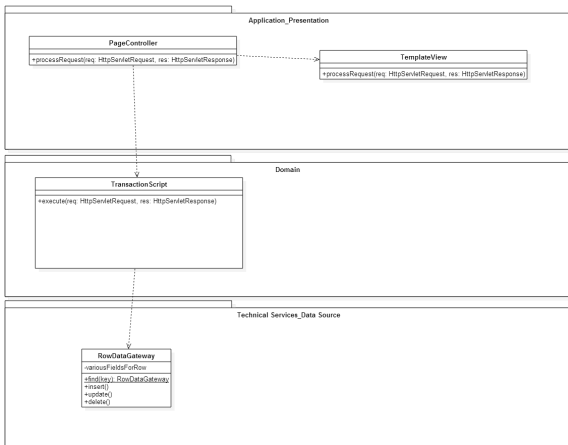

# Page Controller and Transaction Script New Responsibilities

- ▶ Page Controller
  - ▶ Process Incoming Requests: We now distinguish between the application-level logic of dealing with the fact that any request has come in from the web and the nuts and bolts specific to this type of request.
- ▶ Transaction Script
  - ▶ Extract Parameters: We now consider this separately from “Process Incoming Requests”, as it is specific to the request.
  - ▶ Apply Domain Logic

# Page Controller Diagram

Stuart Thiel

Review

# New Patterns: Page Controller

- ▶ View Helper
- ▶ Ease access to the data for the Template View

# View Helper New Responsibilities

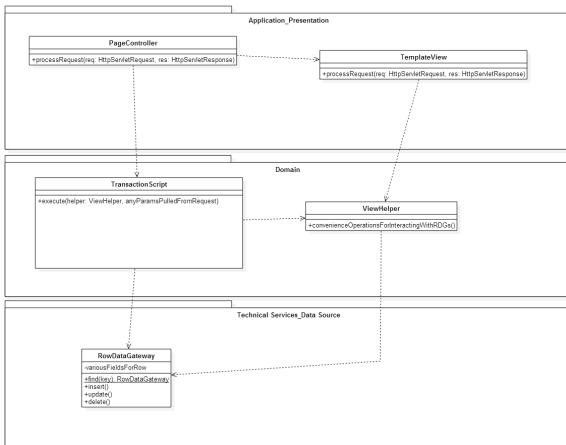

- ▶ View Helper
  - ▶ Ease access to the data for the Template View
  - ▶ ... this isn't a real responsibility, but it introduces the idea of a helper to reduce some of the complexity of interacting between layers and the idea that what's good for interacting with the Data Source stuff may not be great for the Template View.

# Helper Diagram

Review

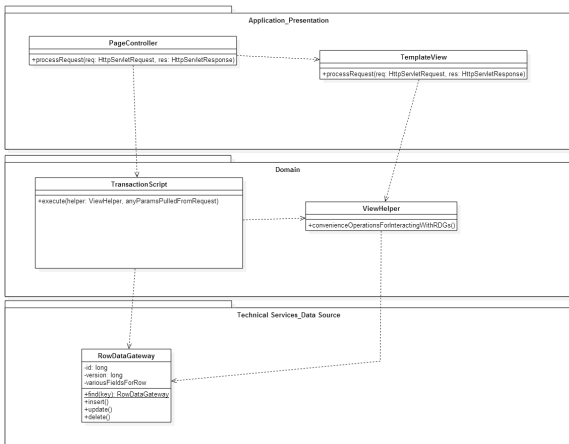

# New Patterns: Identity Field, Optimistic Concurrency Management

- ▶ Identity Field
- ▶ “Saves a database ID field in an object to maintain identity between an in-memory object and a database row. Fowler 2003, p.216
- ▶ Optimistic Offline Lock
- ▶ “Prevents conflicts between concurrent business transactions by detecting a conflict and rolling back the transaction.” Fowler 2003, p.416

# Identity Field and Optimistic Offline Lock Responsibilities

- ▶ Identity Field
  - ▶ Not really a responsibility, but architecturally significant and smooths things over by allowing independent representation of identity
- ▶ Optimistic Offline Lock
  - ▶ Deal with Lost Updates
  - ▶ Not really a responsibility, but architecturally significant allows specifying identity in time

# Identity Field and Optimistic Offline Lock Diagram

# Table Data Gateway(TDG), Data Mapper and Domain Object (or POJO) Patterns

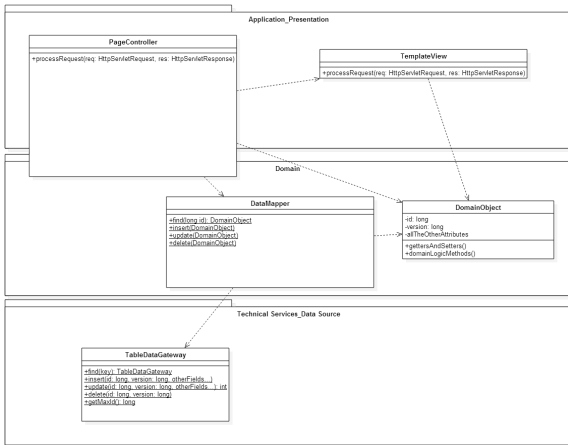

# Title Responsibilities
