

Concordia

Controller Design for a QGV using dsPIC MCU

Course:

MECH 6621

Instructor:

Professor Zhang

Students:

Reza Ahani

Pooya Merat

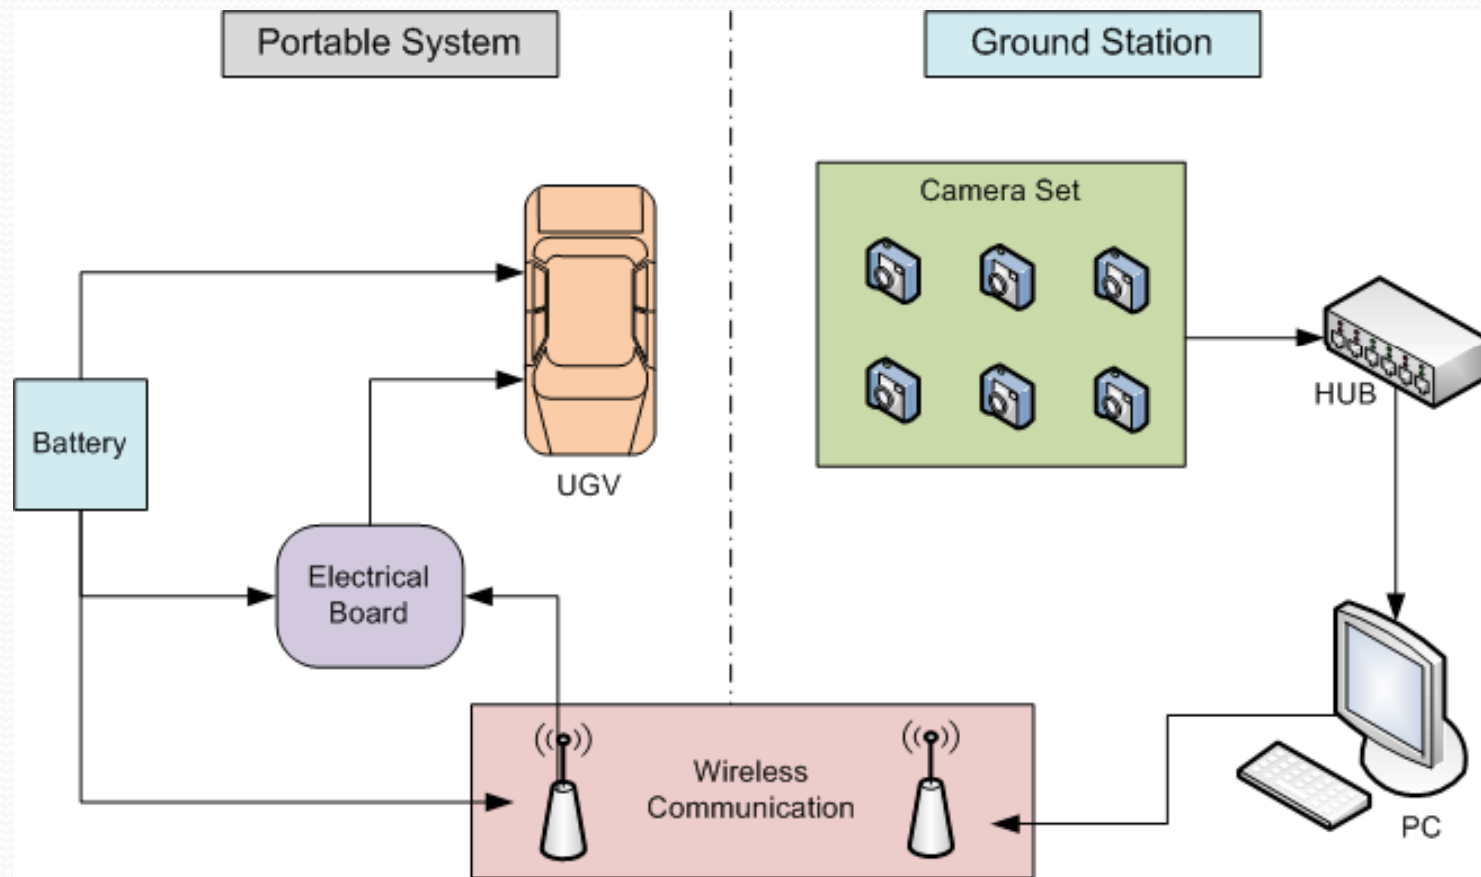

Mohammad Mohajerani

Outline

- ❑ Problem Definition
- ❑ Microcontroller
- ❑ Communication
- ❑ System Functional Modes
 - ❑ Primary Mode: QGV Motion Control
 - ❑ UART, MCPWM, Path Tracking, Object Tracking, Feedback Controller
 - ❑ Secondary Mode: Gripper Control
 - ❑ UART, OCPWM, A/D Convertor
- ❑ User Interface
- ❑ Results

dsPIC Oscillator

- Internal Oscillator
 - Pulse Freq. ≈ 8 MHz
- External Source
 - External Pulse
 - Crystal (20 MHz)
+ PLL \rightarrow 80 MHz Pulse Freq. \rightarrow 40 MHz Instruction Freq.
- **PLL** is MCU option to obtain higher operating speeds.

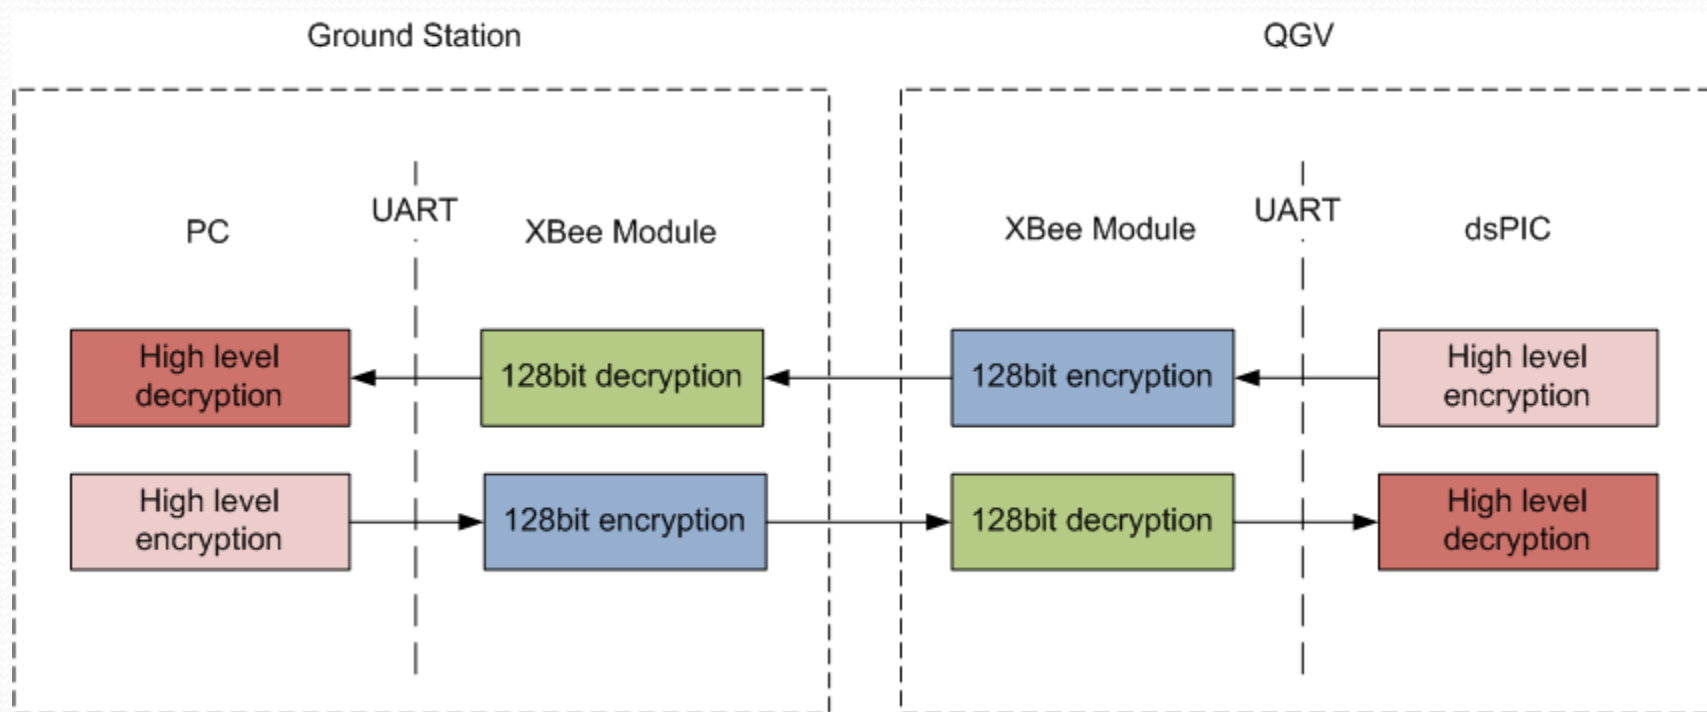

System Initialization

- **No internal EEPROM**
- After system power-on all initial data which is stored in a file in computer is transferred to dsPIC via XBee.
- Whenever the dsPIC is powered it sends a message to the PC indicating that it should be initialized.
- Trimming information (motor calibration values) are sent to dsPIC.
- The user defined desired points are also sent.

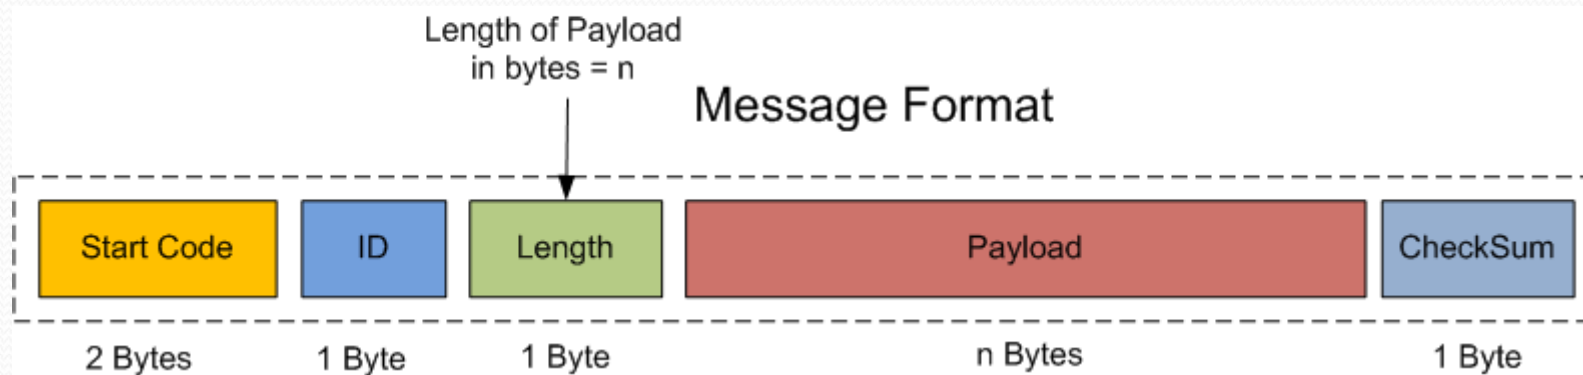

Serial Communication

- Baud Rates ranging from 10 Mbps to 38 bps at 40 MIPS
- Universal Asynchronous Receiver/Transmitter

High Level Encryption

- Implemented in MATLAB (PC) and dsPIC

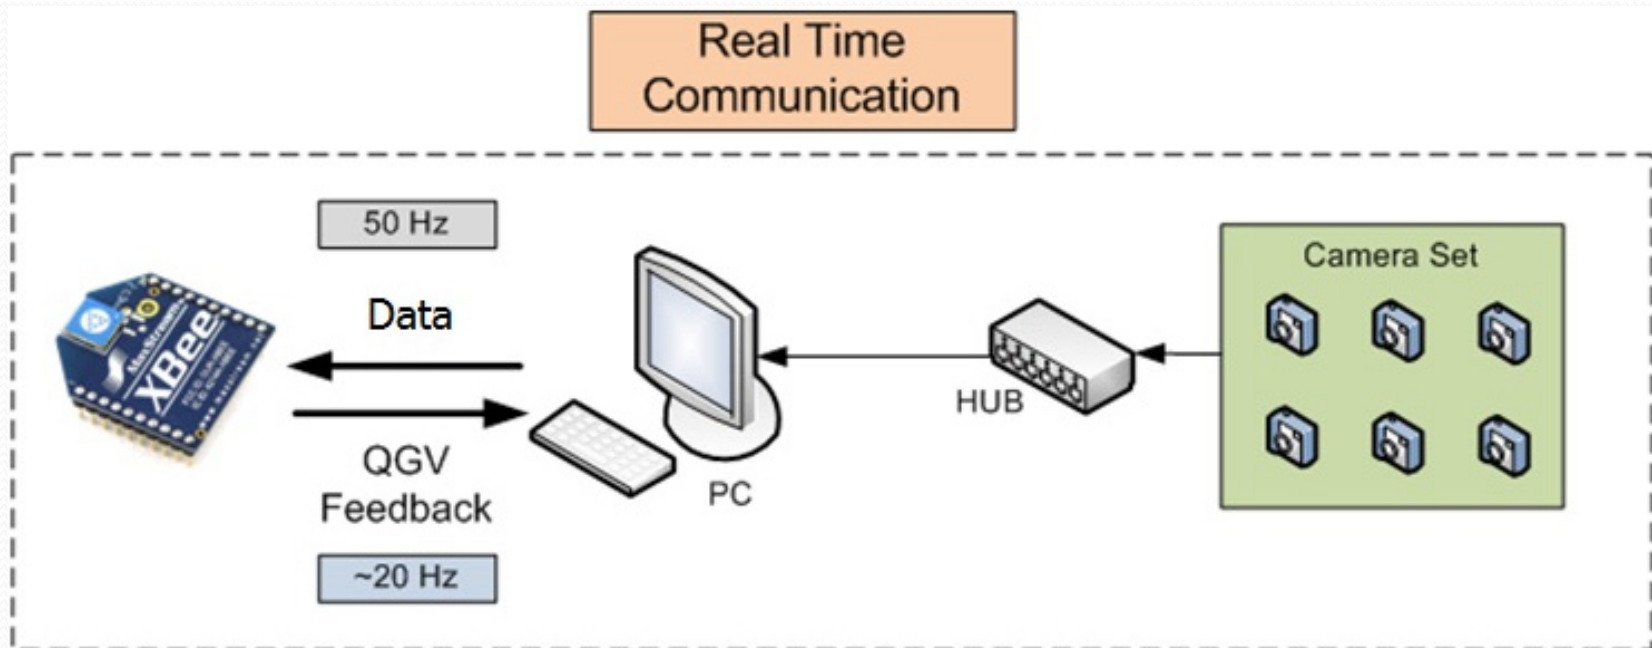

XBee Communication Module

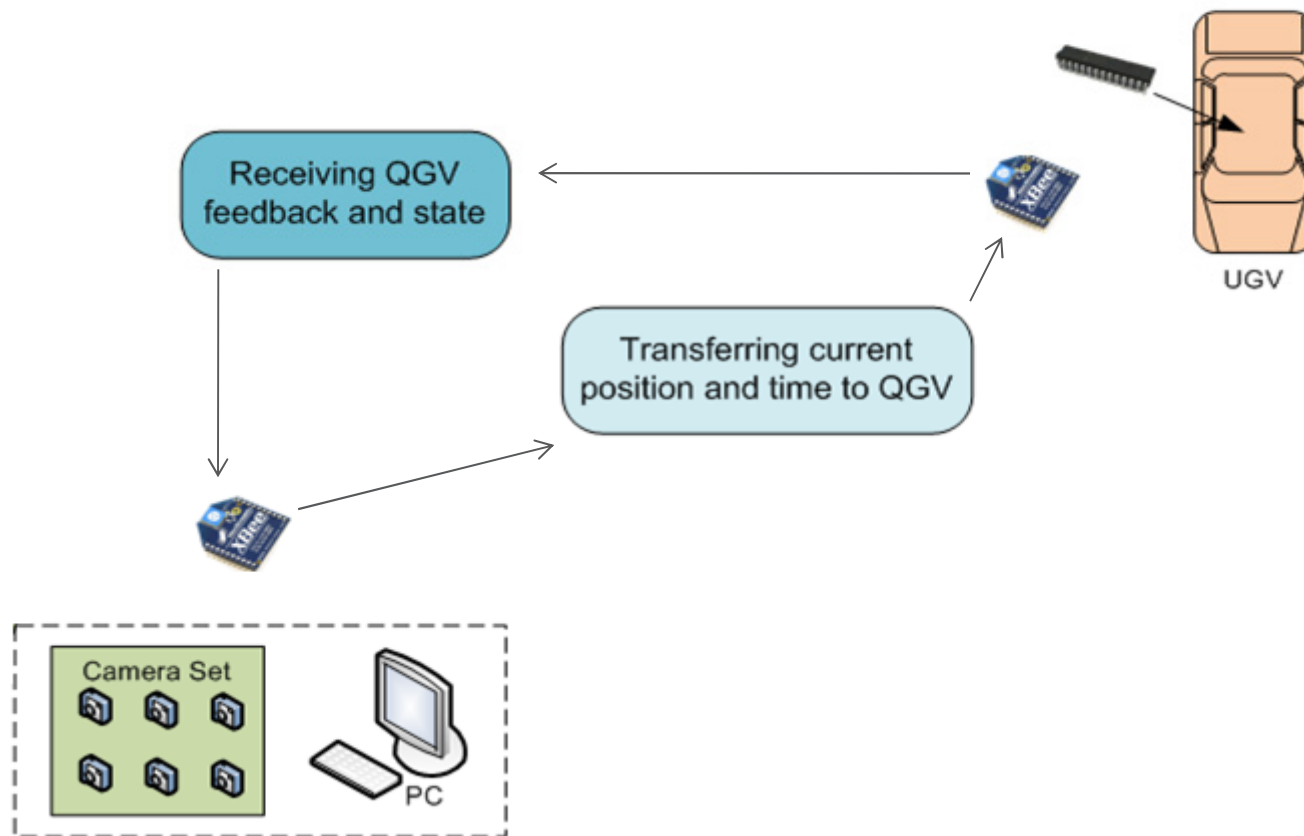

- 50mA @ 3.3V
- 250kbps max data rate (UART)
- 300ft (100m) range
- 128-bit encryption
- Built-in antenna

Real Time Communication

System Primary Functional Mode

Hardware

Control

Motor Right

Motor Left

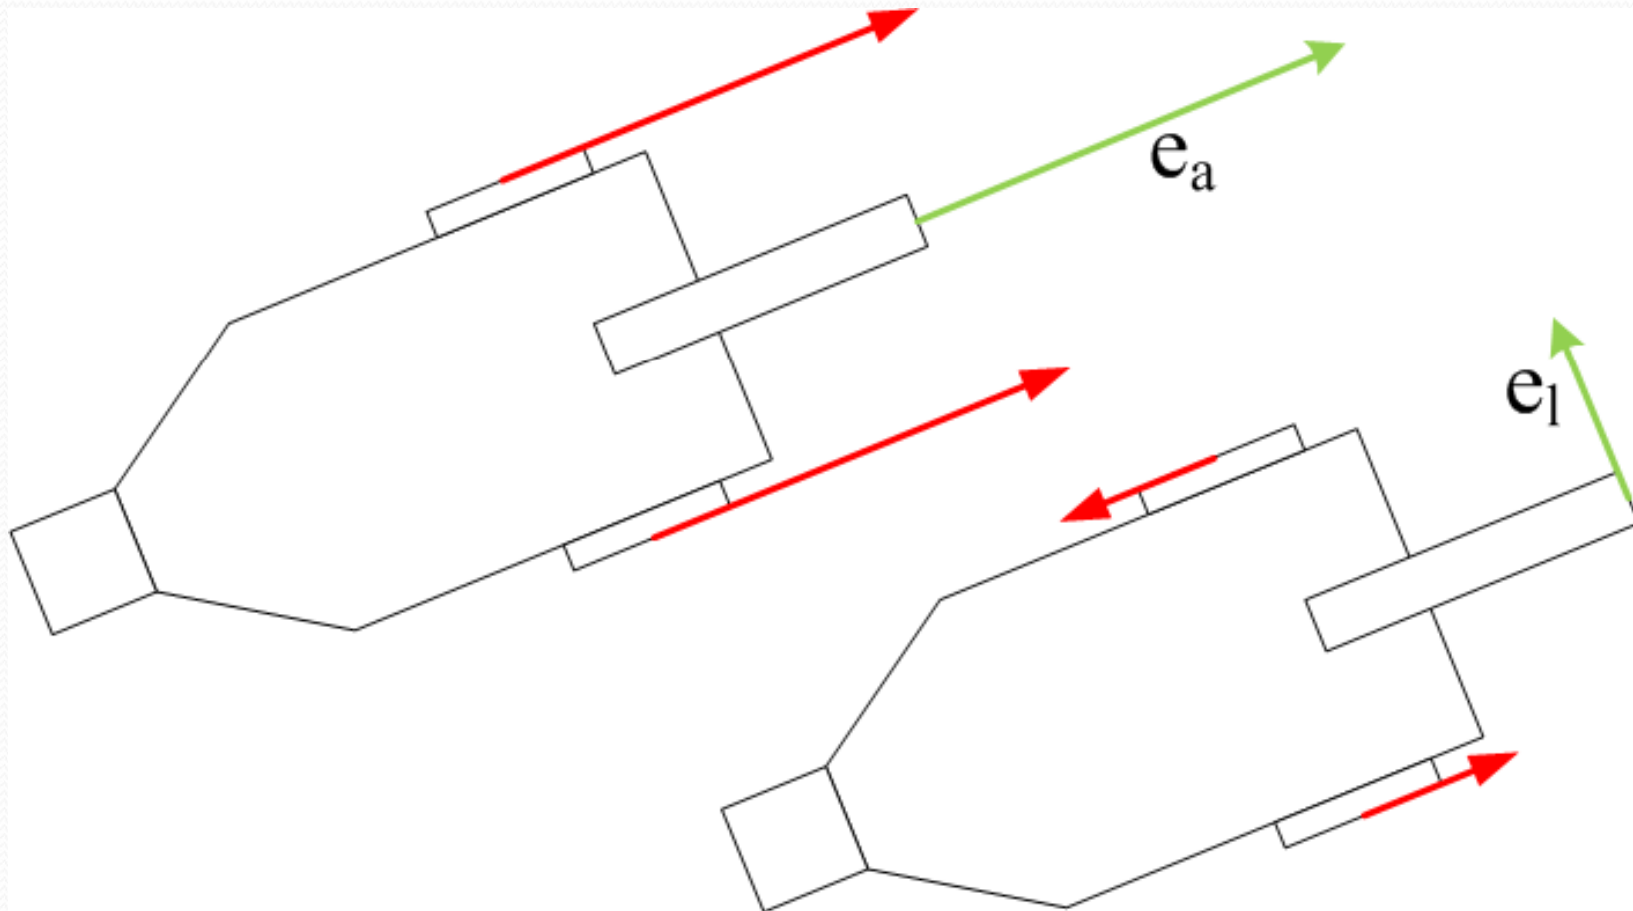

OptiTrack

Kinematic Model: Coordinates

Kinematic Model: Error Conversion

Target Definition

Feedback Control

- Onboard Controller
- PID Controller
- Noise Filtering
- Desired Point Interpolation

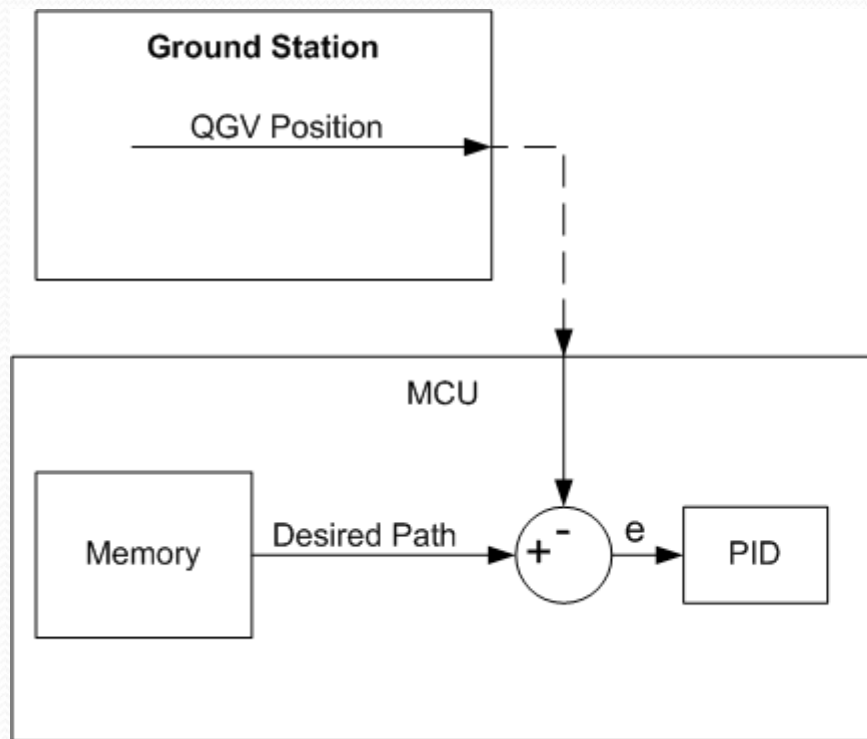

PID Controller

$$u = P.e + I.\int e.dt + D.\dot{e}_f$$

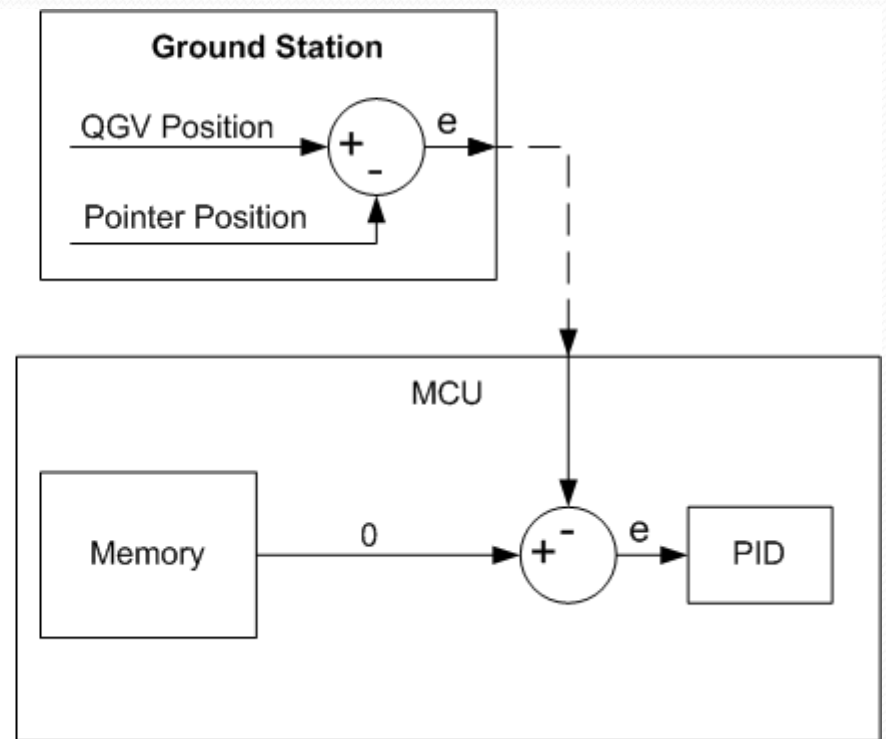

$$\dot{e}_f = -k.\int e_f.dt + e$$

$$\mathcal{L}\{\dot{e}_f\} = \frac{ks}{s+k}\mathcal{L}\{e\}$$

PID Controller

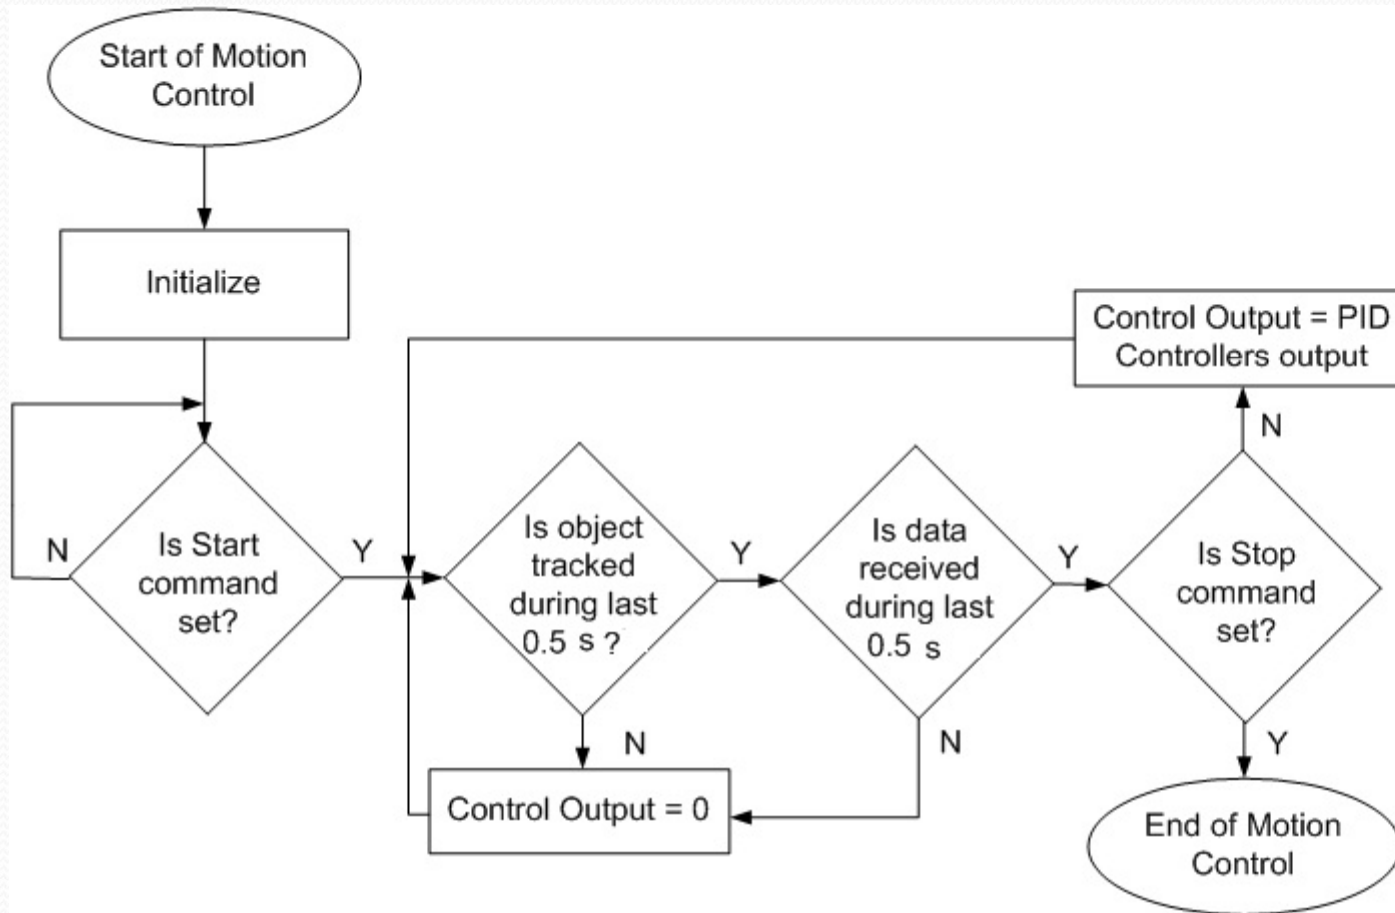

Path Tracking

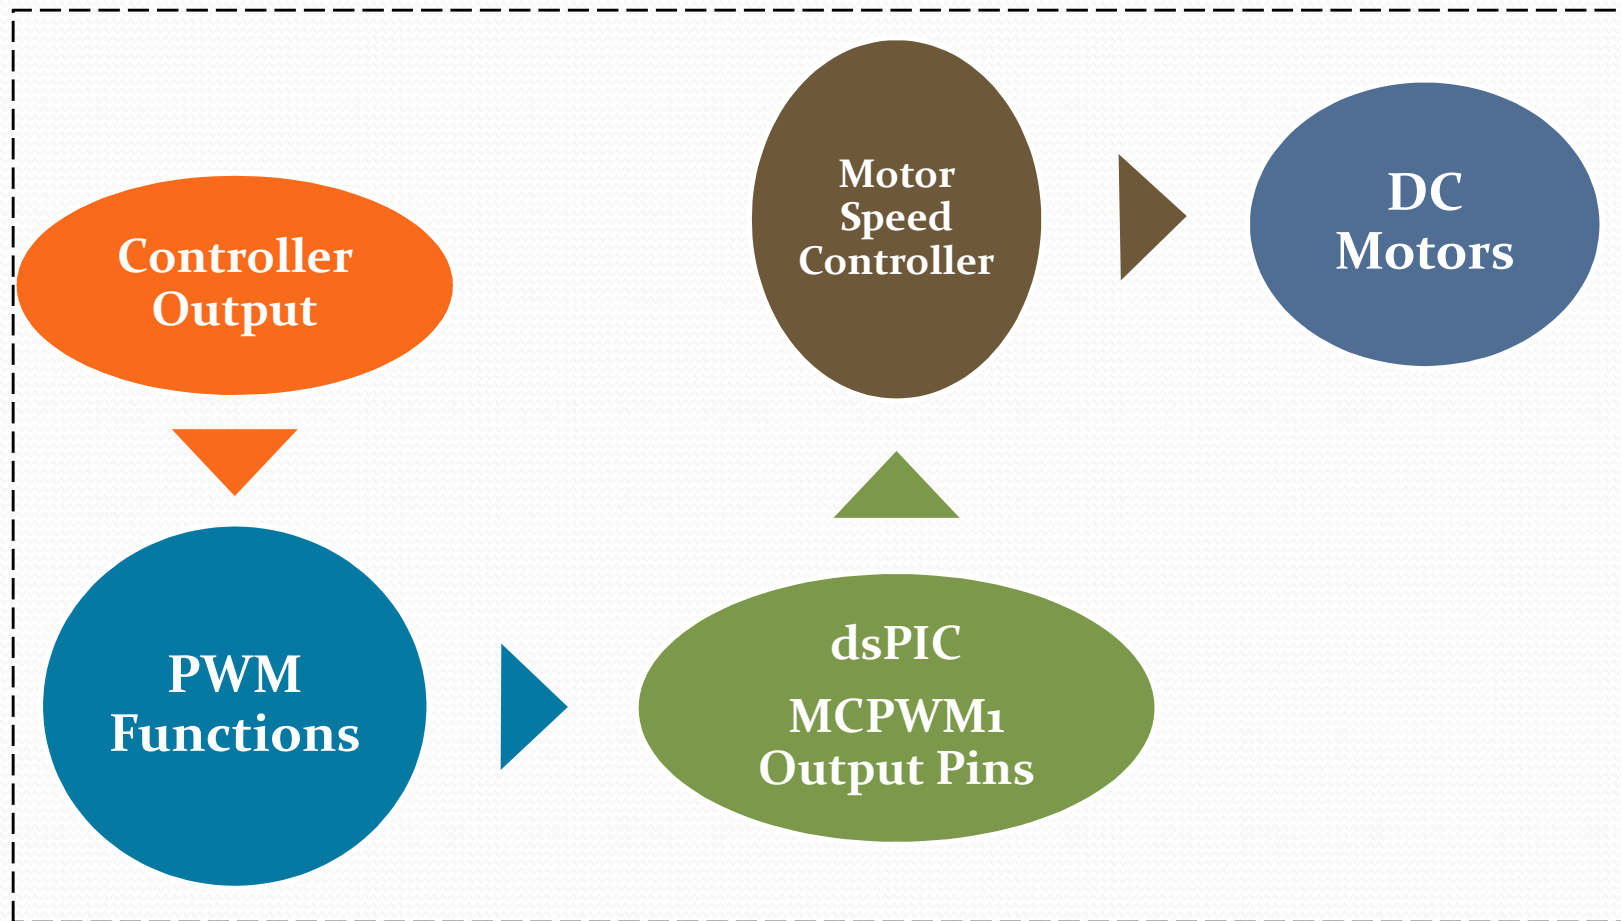

Object Tracking

Control Philosophy

Actuator: DC Motor

MCPWM Module

❖ Motor Control PWM

MCPWM₁

- 6 PWM output
- 3 duty cycle register

MCPWM₂

- 2 PWM output
- 1 duty cycle register

MCPWM Spec

Acts as a **Timer** to count up to a period count value

Programmable **Duty Cycle** and **Time Period** Registers

Time Base **Interrupt**

Interrupt occurs
on **timer rollover**

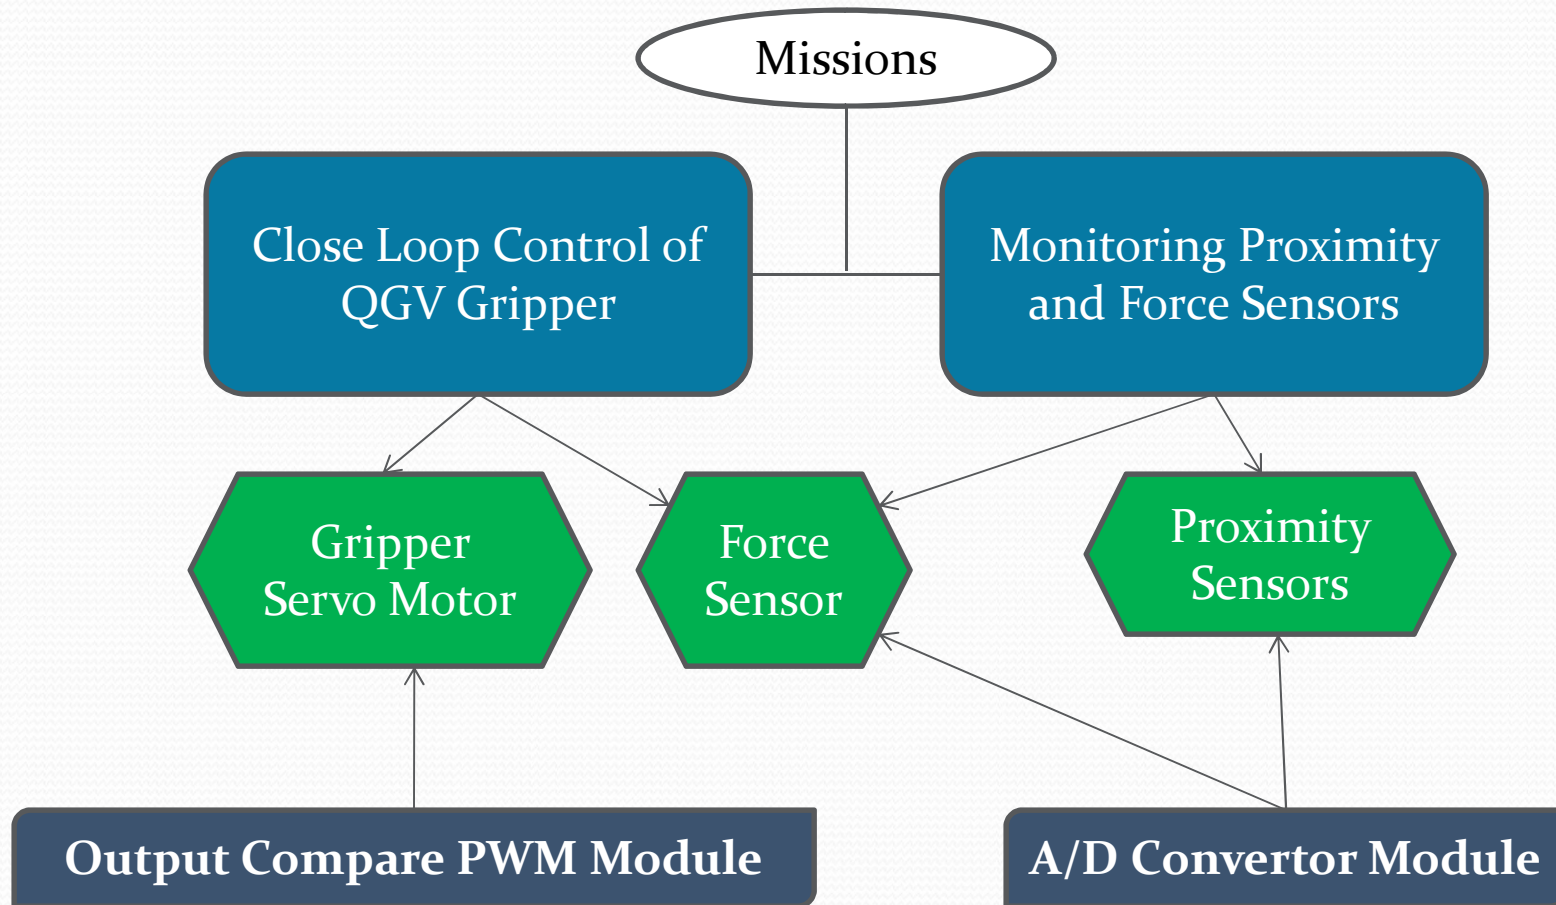

Used for updating PWM
values **smoothly**

Motors

- Two-channel motor speed controller
- Two DC Motors

System Secondary Functional Mode

Hardware

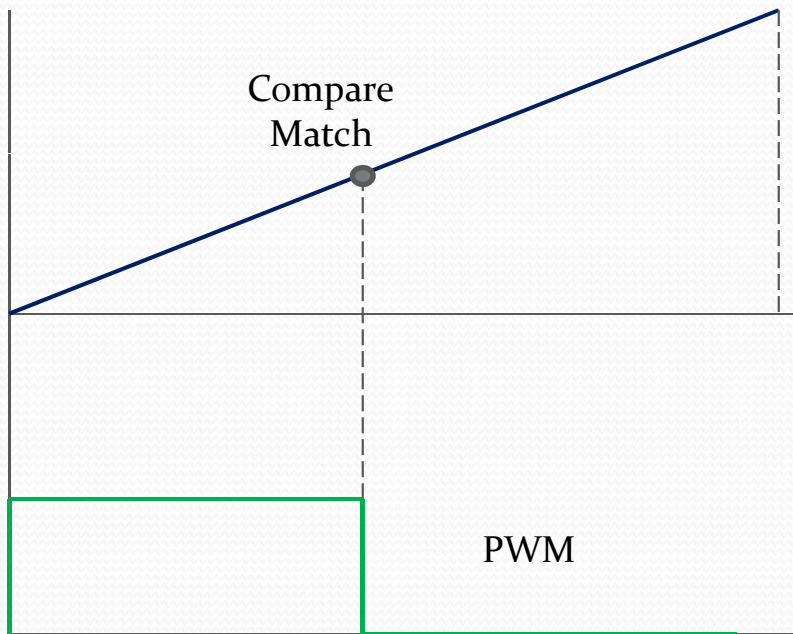

Monitoring Proximity Sensor Output

RC Servo Motor Drive

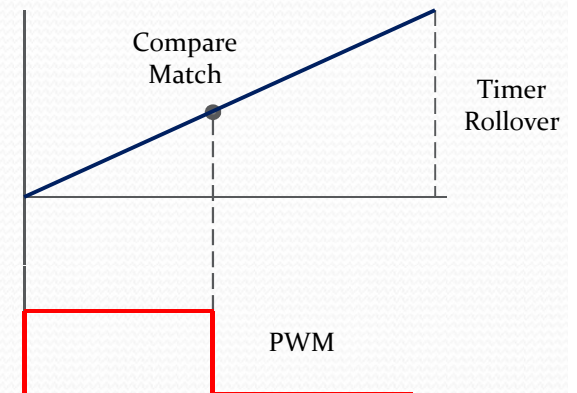

- **Output Compare module in PWM mode**

Servo Model	HS-485HB
Working Voltage	3 – 5 V
PWM range	0.9 – 2.1 ms
PWM Frequency	50 Hz

OC Module in PWM mode

- dsPIC has **4** Output Compare Module
 - Uses **Timer2** or **Timer3** for its time base
 - On timer rollover **OC interrupt** flag is set
 - **OC Pin** selected by Peripheral Pin Select
-
- In OC PWM mode:
 - Timer 3 Period Register = **PWM Period**
 - Output Compare Register = **PWM Duty Cycle**
 - Duty Cycle update** occurs on timer rollover in ISR

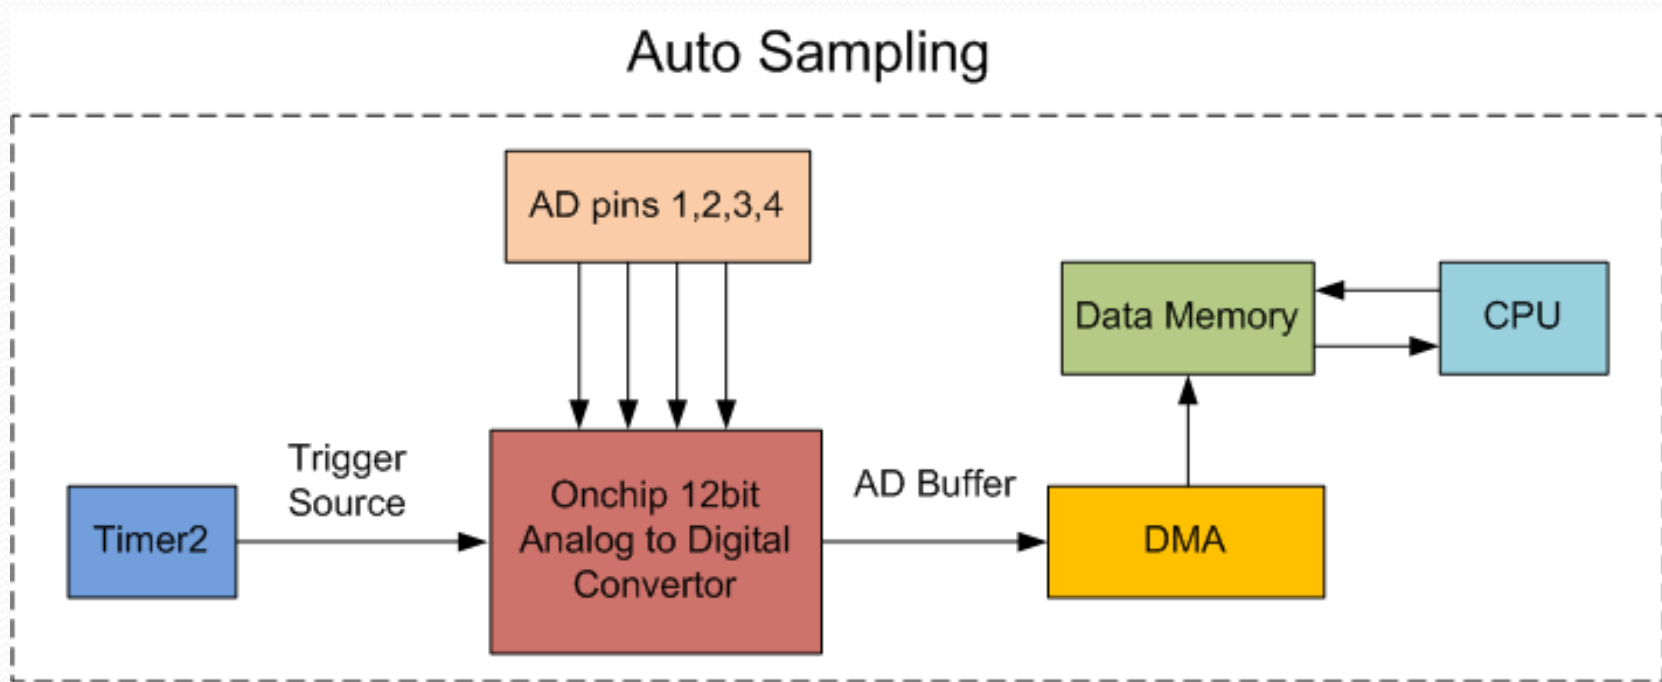

AD Convertor

- Conversion speed up to 1.1 Msps
- Simultaneous sampling of up to four analog input pins
- Automatic Channel Scan mode
- Selectable conversion trigger source
- DMA support, including Peripheral Indirect Addressing
- Operation during CPU Sleep and Idle modes

Automatic Sampling

Graphical User Interface (GUI)

The screenshot displays a graphical user interface (GUI) for a robotic system, featuring several control panels and a central plot area.

QGV Sensors:

- Proximity (Front): 0
- Proximity (Right): 0
- Proximity (Left): 0
- Gripper Force: 0

QGV Debug:

- ErrX: 0
- ErrY: 0
- sin(Yaw): 0
- cos(Yaw): 0

QGV Position:

- X: 0
- Y: 0
- Heading: 0
- Time: 0

Path Generator Settings:

- Max Accel: 0.2
- Max Vel: 0.5
- Min Time: 10

System Feedback:

System Feedback area (empty).

WinCTRL:

- P: 250
- I: 10
- D: 50

Trim:

- Motor: Gripper
- Slider: 1.5 ms
- Tune
- Buttons: Apply as Min, Apply as Max

Central Plot:

A 2D plot area with a grid. The y-axis ranges from 0.5 to 2.5. The plot is currently empty. Controls include 'Clear', 'Grid' (checked), 'Emergency Stop', 'Load Path', and 'Send Points'.

- Control Panel
- Save Profile
- Stop

Future Works

- Using proximity sensors for obstacle avoidance and path defining
- Application of advanced controller considering the high process speed of dsPIC controller
- Control of arms by controlling all the corresponding motors
- Application of the controller for Formation motion
