

**Cloud Networking and Service Provisioning – ENCS 691K
And
Higher Layer Telecommunications Protocols – ELEC 6861
Fall 2017**

**Standard project: A Voice and Conferencing Enabled Auction
System in the Cloud**

This project is for the students who are taking ENCS 691K and Elec6861 this term. It is a superset of the project defined for ENCS 691 K. The additional feature is that any user who registers to the auction system should be able to join a conference in order to exchange media with the other users. Voice is mandatory and video optional. The students should select the appropriate type of conferences (e.g. dial-in, dial-out, ad-hoc)

- The expected output:
 - o A technical report (max: 10 pages).
 - o A PowerPoint presentation (5 minutes) to introduce your demo
 - o A live demo
- Projects should be done in teams of 2 and the 2 students should be taking the two courses this term.
